

VMware vCenter Server™ Plugin for Virtensys

virtensys

DATASHEET

DESCRIPTION

The VMware vCenter Server Plugin for Virtensys allows administrators to easily add or remove shared I/O resources (vAdapters) to their VMware vSphere server hosts.

Centralized management means administrators can manage multiple VIO-4000 appliances, regardless of model type or quantity from a single interface, and stays within the native management context of VMware's vCenter Server.

Advanced policies can also be created and applied to virtual interface to guarantee quality of service (QoS) for critical shared resources.

In addition, administrators have the ability to monitor how virtualized I/O resources are being utilized and view their "physical to virtual" mappings.

PRODUCT FEATURES

- Server registration to management interface to enable I/O resource provisioning
- Ability to create and assign vAdapters from physical I/O adapter resources
- vAdapters (depending on VIO-4000 model) can be: 10GbE vNICS, 8 Gbps FC vHBAs, and/or virtualized LUNs (vLUNs)
- View "physical to virtual" mappings
- Set advanced quality of service (QoS) policies for bandwidth allocation
- Supports OEM branding and customization

REQUIREMENTS:

- Client operating systems - Microsoft® Windows XP, Windows 7, Windows 2003 or Windows 2008
- Requires Microsoft .NET Version 3.5
- Supported with use with vCenter 4, vCenter 5, vSphere 4.0/4.1, vSphere 5
