

PRESS RELEASE

VIRTENSYS EXECUTIVE TO TALK ABOUT I/O VIRTUALIZATION AT THE SERVER DESIGN SUMMIT

Delivering Innovative I/O Virtualization Solutions for the Data Center

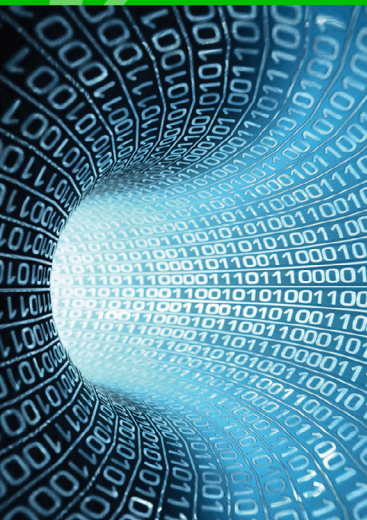

MANCHESTER, England and BEAVERTON, Ore. – November 29, 2010 — Virtensys™, Ltd, a provider of I/O virtualization solutions, today announced that Robert Napaa, Virtensys vice president of business development, will be a speaker in the I/O Virtualization track at the Server Design Summit, taking place on December 1 at the Santa Clara Convention Center. Napaa will talk about redefining the server I/O boundary in today’s data centers.

The two-hour track (2:15-4:15 p.m.) will bring together industry experts and vendors to discuss the challenges presented by virtualization in multi-core servers used in data centers and cloud computing environments. Such servers need fast access to high-performance I/O and storage, requiring the implementation of virtualized intelligent I/O sharing. The session will present approaches to server I/O virtualization, inter-VM switching, and testing within a virtual environment.

About Virtensys Ltd

Virtensys develops leading-edge, patented PCI Express-based I/O virtualization solutions for servers and storage platforms, revolutionizing the way I/O infrastructures are deployed and used in data centers. Worldwide organizations are deploying the Virtensys I/O virtualization appliances to significantly improve their data center’s agility, performance and I/O utilization while reducing costs, power consumption and management expenses. The company was founded in December 2005 by leading technologists in the fields of high-performance switching, networking, and systems design, and is backed by several premier technology venture capital firms.
