

Network Products Guide Names Virtensys Winner of 2011 Hot Companies and Best Products Award

Virtensys I/O Virtualization Appliance Wins in the Virtualization Category

MANCHESTER, England and BEAVERTON, Ore. – May 25, 2011 – [Virtensys](#)[™], Ltd, a provider of I/O virtualization solutions, announced today that Network Products Guide, industry's leading technology research and advisory guide, has named the [Virtensys VIO-4000](#) series I/O virtualization appliance a winner of the 6th Annual 2011 [Hot Companies and Best Products Awards](#) in the Virtualization category.

The Virtensys I/O virtualization appliances reduce the typical repetitive and manual operations required to setup, maintain, change and manage I/O connectivity for a group of physical servers. Servers can be simply wired once and then reconfigured at will to support different applications without the need for any additional physical changes.

An annual achievements and recognition awards program with active participation from a broad spectrum of industry voices, the annual Hot Companies and Best Products recognition program encompasses the world's best in organizational performance, products and services, executives and management teams, successful deployments, product management and engineering, support and customer satisfaction, and public relations in every area of information technology.

“This industry and peer award recognition of Virtensys’ I/O virtualization solutions by Network Products Guide is a great honor,” said Stephen Spellicy, director of marketing

at Virtensys. “It further validates our position as a technology company that is successfully solving the complex I/O bottlenecks faced by organizations today, which inhibit data center scale.”

About Virtensys

The award-winning Virtensys VIO-4000 series I/O virtualization appliances are changing the way IT managers manage and deploy I/O resources to standard rackmount-based servers, enabling a more agile, scalable and dynamic data center. Built upon Virtensys’ patented PCIe I/O virtualization technology, the VIO-4000 product line consolidates and virtualizes traditional server network and storage I/O connectivity for both physical and virtualized server environments. Server administrators can now simply “wire-once” and then remotely manage and provision their I/O resources as needed.
